EMG/NCS TESTING

The benefits of sending clients for Electrodiagnostic testing, incorporating electromyography (EMG) and nerve conduction testing (NCS) performed by a board-certified doctor cannot be overstated. This diagnostic procedure assesses nerve and muscle function, and can provide valuable evidence to support a personal injury claim.

Why EMG/NCS Testing?

- ✓ Assesses nerve and muscle function
- ✓ Provides measurable data of electrical activity in the muscles & nerves
- ✓ Provides concrete evidence of nerve damage, muscle dysfunction, or other injuries
- ✓ Determines acuity vs. chronicity of an injury
- ✓ Supports arguments regarding the severity & impact of the client's injuries

(EMG/NCS) testing performed by a board-certified doctor has numerous benefits. From enhanced credibility and objectivity to comprehensive evaluations and persuasive evidence, the results of an EMG test can significantly strengthen a personal injury claim. Using this diagnostic procedure, attorneys can effectively advocate for their clients and increase the chances of obtaining a fair and favorable outcome.

Dr. Suzanne Manzi with Performance Pain and Sports Medicine is Board Certified by the American Board of Electrodiagnostic Medicine (ABEM). Our Houston office has AANEM Electrodiagnostic Laboratory Accreditation with Exemplary Status.
